

**Congress of the United States**  
Washington, DC 20510

September 17, 2009

Mr. Jeffrey Immelt  
Chairman, CEO  
General Electric Company  
3135 Easton Turnpike  
Fairfield, CT 06828-0001

Dear Mr. Immelt:

Maintaining and rebuilding our industrial base and investing in high skill jobs are goals we share. In New Mexico, we are working hard to create a new economy that includes renewable energy, and we are experiencing growth in this new sector, specifically with solar and bio-fuel companies. However, we still need to retain traditional high value manufacturing jobs, like those represented at your aviation plant, to be part of the state's portfolio. GE's tenure in New Mexico is valued and the 400 skilled jobs at the plant are an important part of the Albuquerque economy.

Accordingly, the news of GE's plans to close the aviation plant and relocate the jobs elsewhere has been most unwelcome news. We have heard that retaining the plant's operation in Albuquerque would require a significant investment to upgrade the Albuquerque plant to a sustainable level of productivity. We believe such an investment deserves serious consideration from all vested stakeholders, including city, county, state and federal entities, as well as GE, its workers and their representatives.

A shared investment from all stakeholders would seem to be a likely strategy for keeping these jobs in New Mexico, and we understand the local workers are quite willing to negotiate in good faith meaningful contributions to such a shared investment. Having said that, we also understand these employees have been asked to make draconian sacrifices in both wages and benefits, seemingly putting them at levels far below workers at GE plants elsewhere in the country. This does not seem to be reasonable.

We urge GE to be creative in looking at ways to keep the plant open, and to be fair to current employees who have been loyal to the company and productive members of GE's manufacturing team.

We also ask you to look at Albuquerque as a location for GE's green energy manufacturing business. Having a plant in the Albuquerque area that produces a renewable energy product would create high skill jobs and reinforce your commitment of rebuilding our nation's industrial base.

New Mexico and our congressional delegation are prepared to partner with you to retain the current workforce in Albuquerque and work with you to grow these numbers through diversifying the product lines manufactured in New Mexico. Our state fully intends to become a leader in renewable energy production in the U.S. and we would like your company to participate in that endeavor.

We look forward to discussing with you this urgent and time-sensitive matter.

Sincerely,

Jeff Bingaman  
U.S. Senator

Tom Udall  
U.S. Senator

Martin Heinrich  
Member of Congress (NM-1)

Ben Ray Luján  
Member of Congress (NM-3)

Harry Teague  
Member of Congress (NM-2)
